

Worked for 21s

Yes! Focusing only on records where `eventType` is exactly `DialogueEvent` (ignoring the extra spaces in your message), the attached log contains **1,347 DialogueEvent records**. I checked the full JSON file directly and deduplicated the values.

wenyi081326-1.stratalog.logdata

1. Unique values of `sceneName`

There are **9 unique** `sceneName` values:

`sceneName`

Unit 1 Dev

Unit 2 Prod (Refactor)

Unit 3 Dev

Unit 3 Dungeon Dev

Unit 4 Dev

Unit 4 Dev - Anderson Base

Unit 4 Dev - Dungeon

Unit 5 Dev

Unit 5 Dev - Dungeon

Examples in the file confirm DialogueEvents occurring in locations such as `Unit 1 Dev`, `Unit 3 Dungeon Dev`, `Unit 4 Dev - Anderson Base`, and `Unit 5 Dev`.

wenyi081326-1.stratalog.logdata

2. Subvariables contained within `data`

Across all `DialogueEvent` records, the `data` object contains these **3 possible subvariables**:

```
dialogueEventType
conversationId
nodeId
```

`dialogueEventType`

There are **3 unique values**:

DialogueStartEvent
DialogueNodeEvent
DialogueFinishEvent

The log shows all three forms directly.

wenyi081326-1.stratalog.logdata

conversationId

There are **40 unique values**:

10, 11, 13, 15, 16, 17, 18,
30, 31, 32, 35, 36, 37,
70, 73, 75, 78, 79,
82, 83, 84, 88, 90, 91, 92, 95, 96, 98, 99,
100, 104, 105, 106, 107, 109, 111, 114, 116, 117, 118

For example, the retrieved records directly show `conversationId` values such as 10 ,

35 , 82 , and 99 .

wenyi081326-1.stratalog.logdata

nodeId

There are **193 unique** `nodeId` **values**:

0, 1, 2, 3, 4, 5, 6, 7, 8, 9,
10, 11, 12, 13, 14, 15, 16, 17, 18, 19,
20, 21, 22, 23, 24, 25, 26, 27, 28, 29,
30, 31, 32, 33, 34, 35, 36, 37, 38, 39,
40, 41, 42, 43, 44, 45, 46, 47, 48, 49,
50, 51, 52, 53, 54, 55, 56, 57, 58, 59,
60, 61, 62, 63, 64, 65, 66, 67, 68, 69,
70, 71, 72, 73, 74, 75, 76, 77, 78, 79,
80, 81, 82, 83, 84, 85, 86, 87, 88, 89,
90, 91, 92, 93, 94, 95, 96, 97, 98, 99,
100, 101, 102, 103, 104, 105, 106, 107, 108, 109,
110, 111, 112, 113, 114, 115, 116, 117, 118, 119,
120, 122, 123, 124, 125, 126, 127, 128,
134, 135, 136, 137, 138, 140, 141, 143, 144, 146,
147, 148, 149, 154, 155, 156, 157, 158, 159, 160,
162, 163, 174, 175, 176, 177, 178, 179,
181, 182, 183, 184, 187, 188, 190, 191, 193, 194,
195, 196, 198, 199, 200, 201, 202, 203, 204, 205,
208, 209, 210, 211, 212, 213, 217, 218,
224, 226, 227, 228, 229, 230, 269, 271, 273

One important structural detail: `nodeId` **is not present in every DialogueEvent**. It appears in the records whose `dialogueEventType` is `DialogueNodeEvent` .

`DialogueStartEvent` and `DialogueFinishEvent` records contain `dialogueEventType` and `conversationId` , but do not contain `nodeId` . This pattern is directly visible in the log.

wenyi081326-1.stratalog.logdata

So the basic structures observed are:

JSON

```
{  
  "dialogueEventType": "DialogueStartEvent",  
  "conversationId": ...  
}
```

JSON

```
{  
  "dialogueEventType": "DialogueNodeEvent",  
  "conversationId": ...,  
  "nodeId": ...  
}
```

JSON

```
{  
  "dialogueEventType": "DialogueFinishEvent",  
  "conversationId": ...  
}
```

I did not find any other subvariables inside `data` for `DialogueEvent` beyond these three.
